

AGE AT INCIDENT ANALYSIS

Study Design

- Analysis of age at diagnosis for medical conditions
- Data source: HPP 10K Dataset with diagnosis dates
- Sample: N = 31,146 subjects with valid year of birth

Key Calculation

- Age at diagnosis = Year of diagnosis - Year of birth
- Incidence proportion = Count diagnosed at age / Total diagnosed
- $-\log_{10}(\text{incidence})$ = Higher values = Rarer at that age

Data Quality Notes

- Excluded dates = "2000-01-01" (placeholder for unknown date)
- ~30% of diagnosis dates are placeholders (excluded)
- Minimum 20 valid cases required per condition
- 66 conditions met inclusion criteria

How to Interpret $-\log(\text{Incidence})$ Plots

- Lower $-\log$ values (warmer colors) = More common at that age
- Higher $-\log$ values (cooler colors) = Less common at that age
- The curve shows WHEN in life conditions typically develop

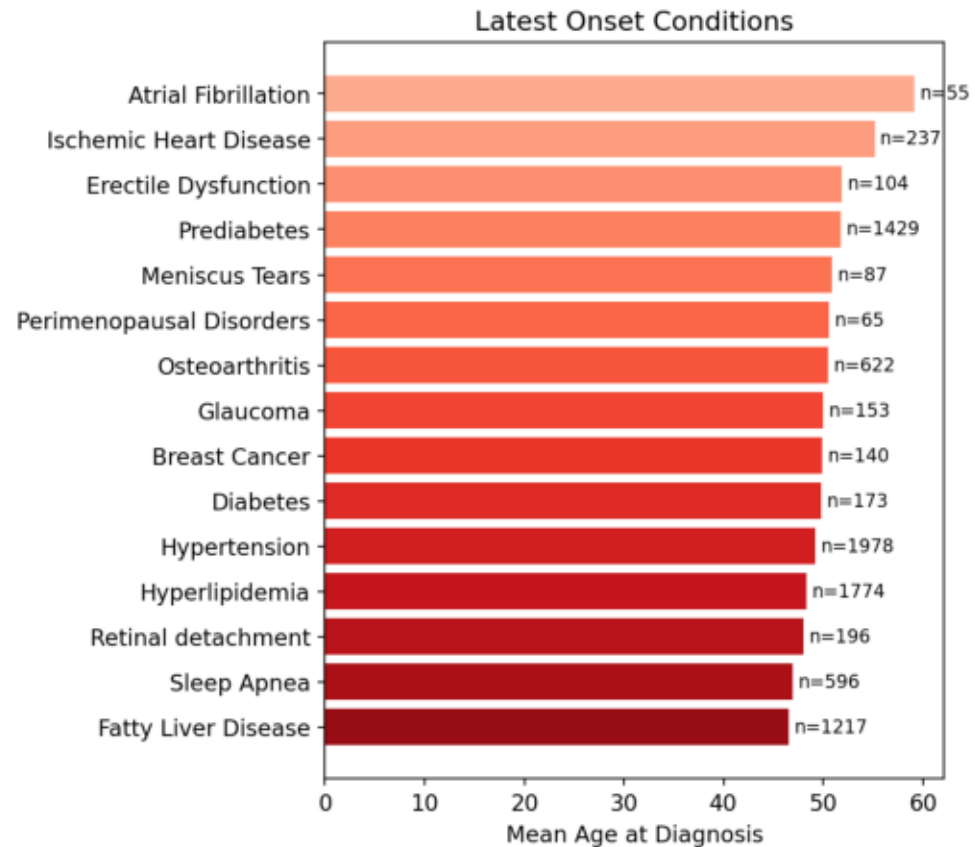

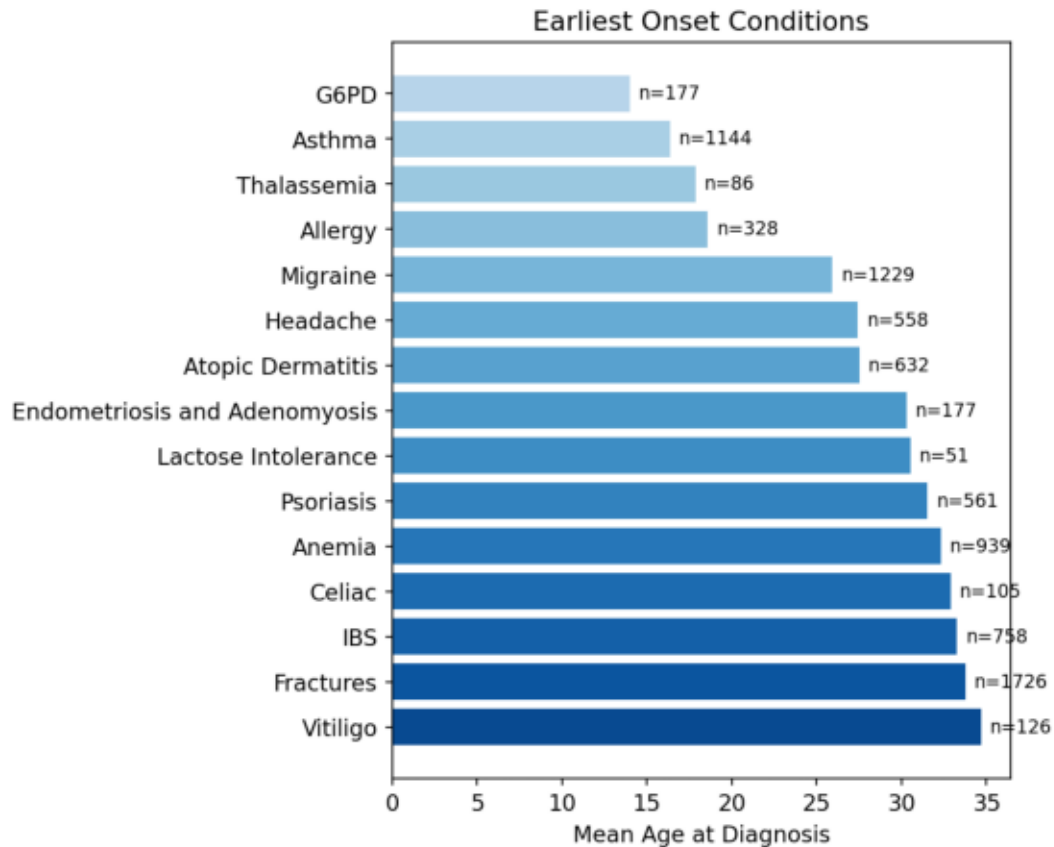

Key Patterns

- EARLY ONSET: Asthma, Allergies, ADHD, Migraine
 - These conditions peak in childhood/young adulthood
- MID-LIFE ONSET: Depression, Anxiety, Back Pain, Obesity
 - These conditions peak around ages 35-50
- LATE ONSET: Hypertension, Diabetes, Osteoarthritis
 - These conditions peak after age 50

Important Caveats

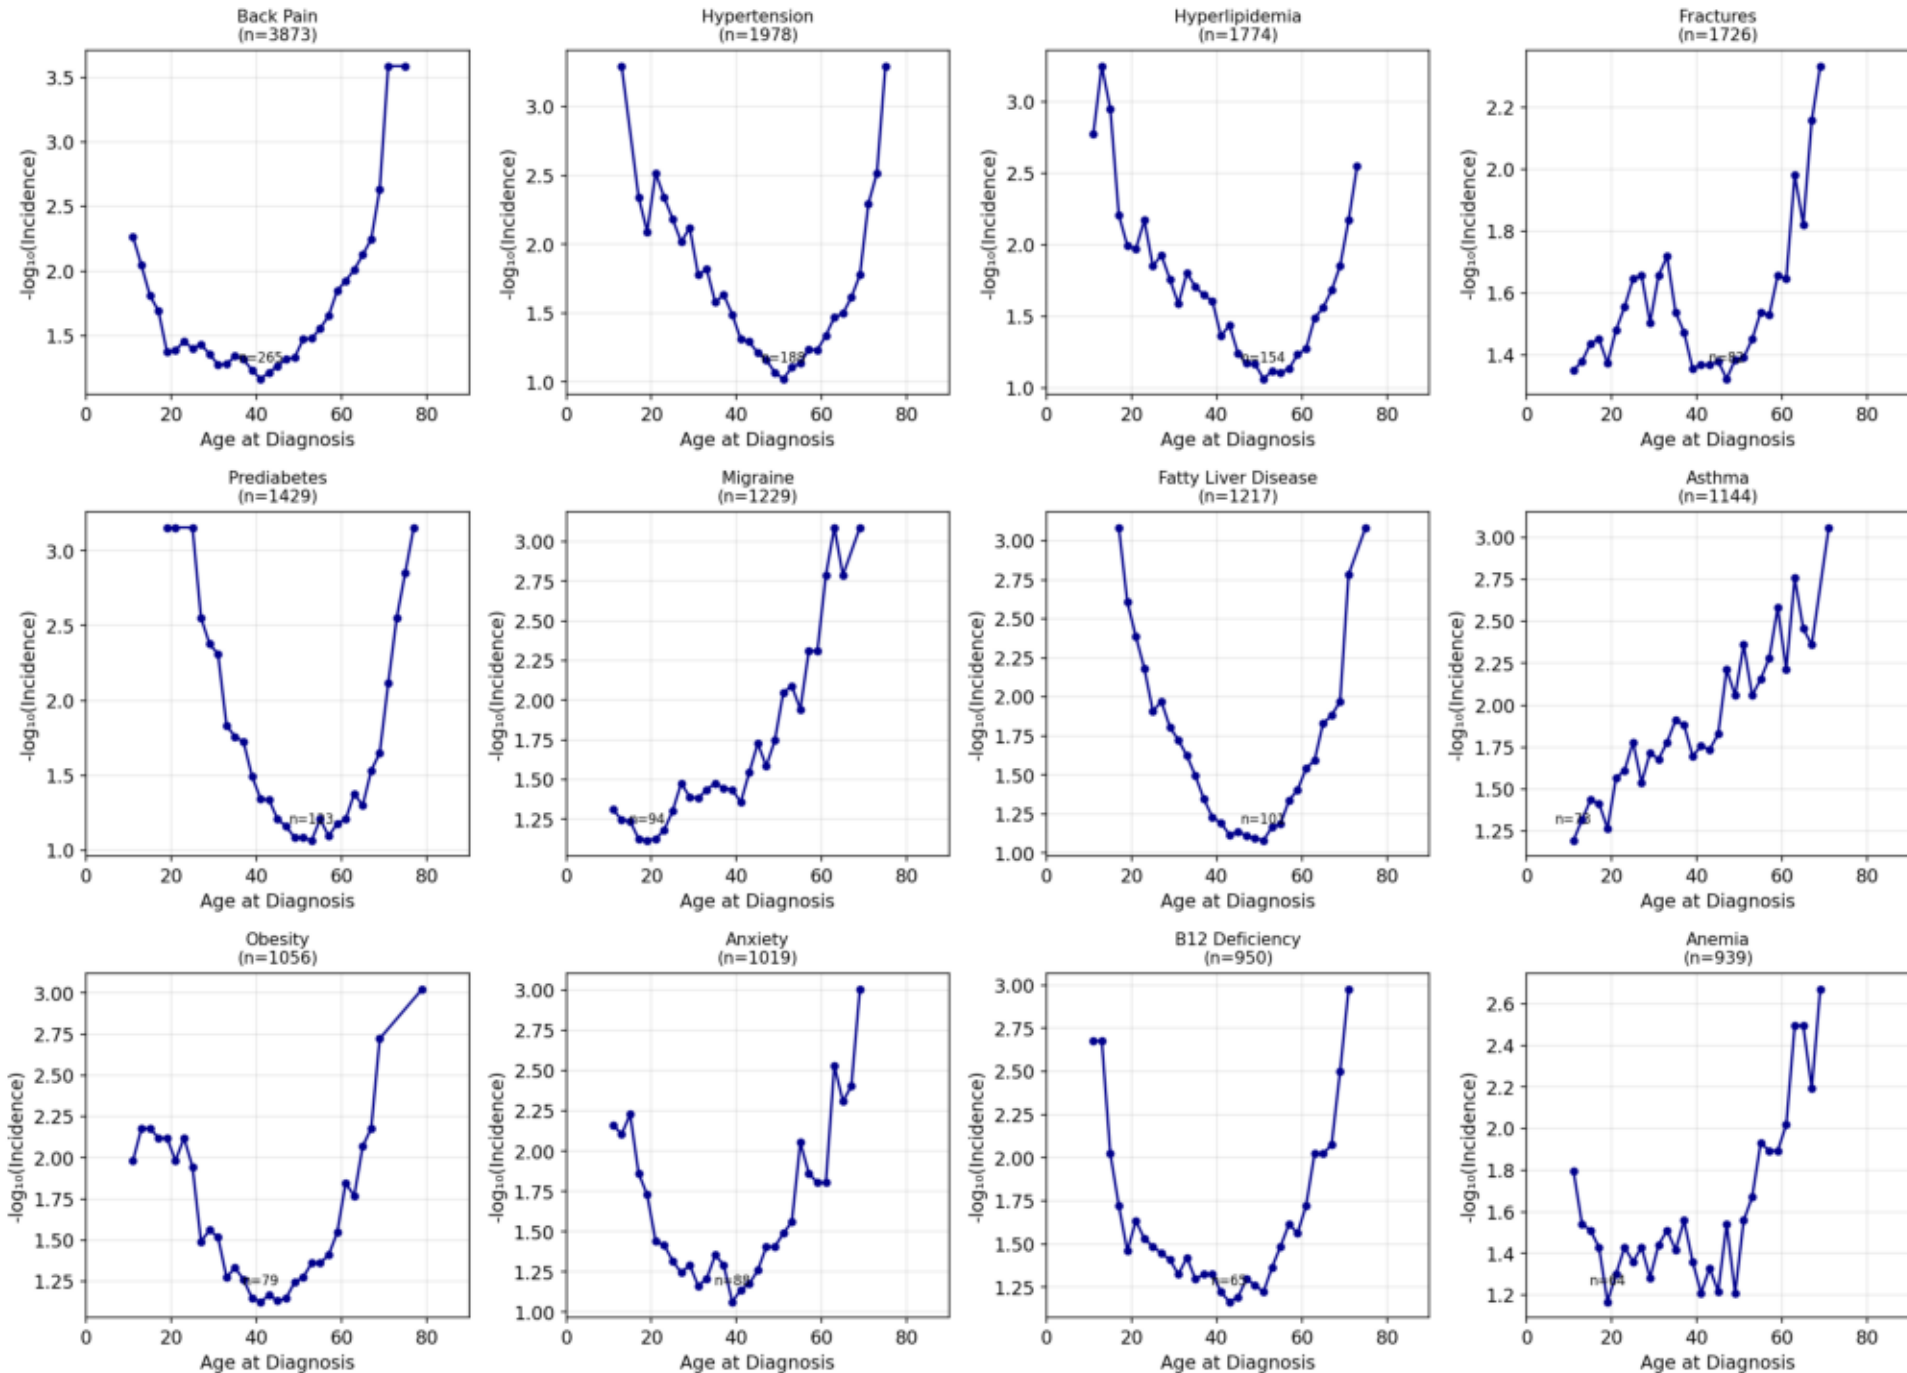

- Age at diagnosis \neq Age at onset (diagnosis may lag years)
- Cohort effects may bias older generations
- Survival bias may affect late-onset conditions

When Do Conditions Develop? Early vs Late Onset

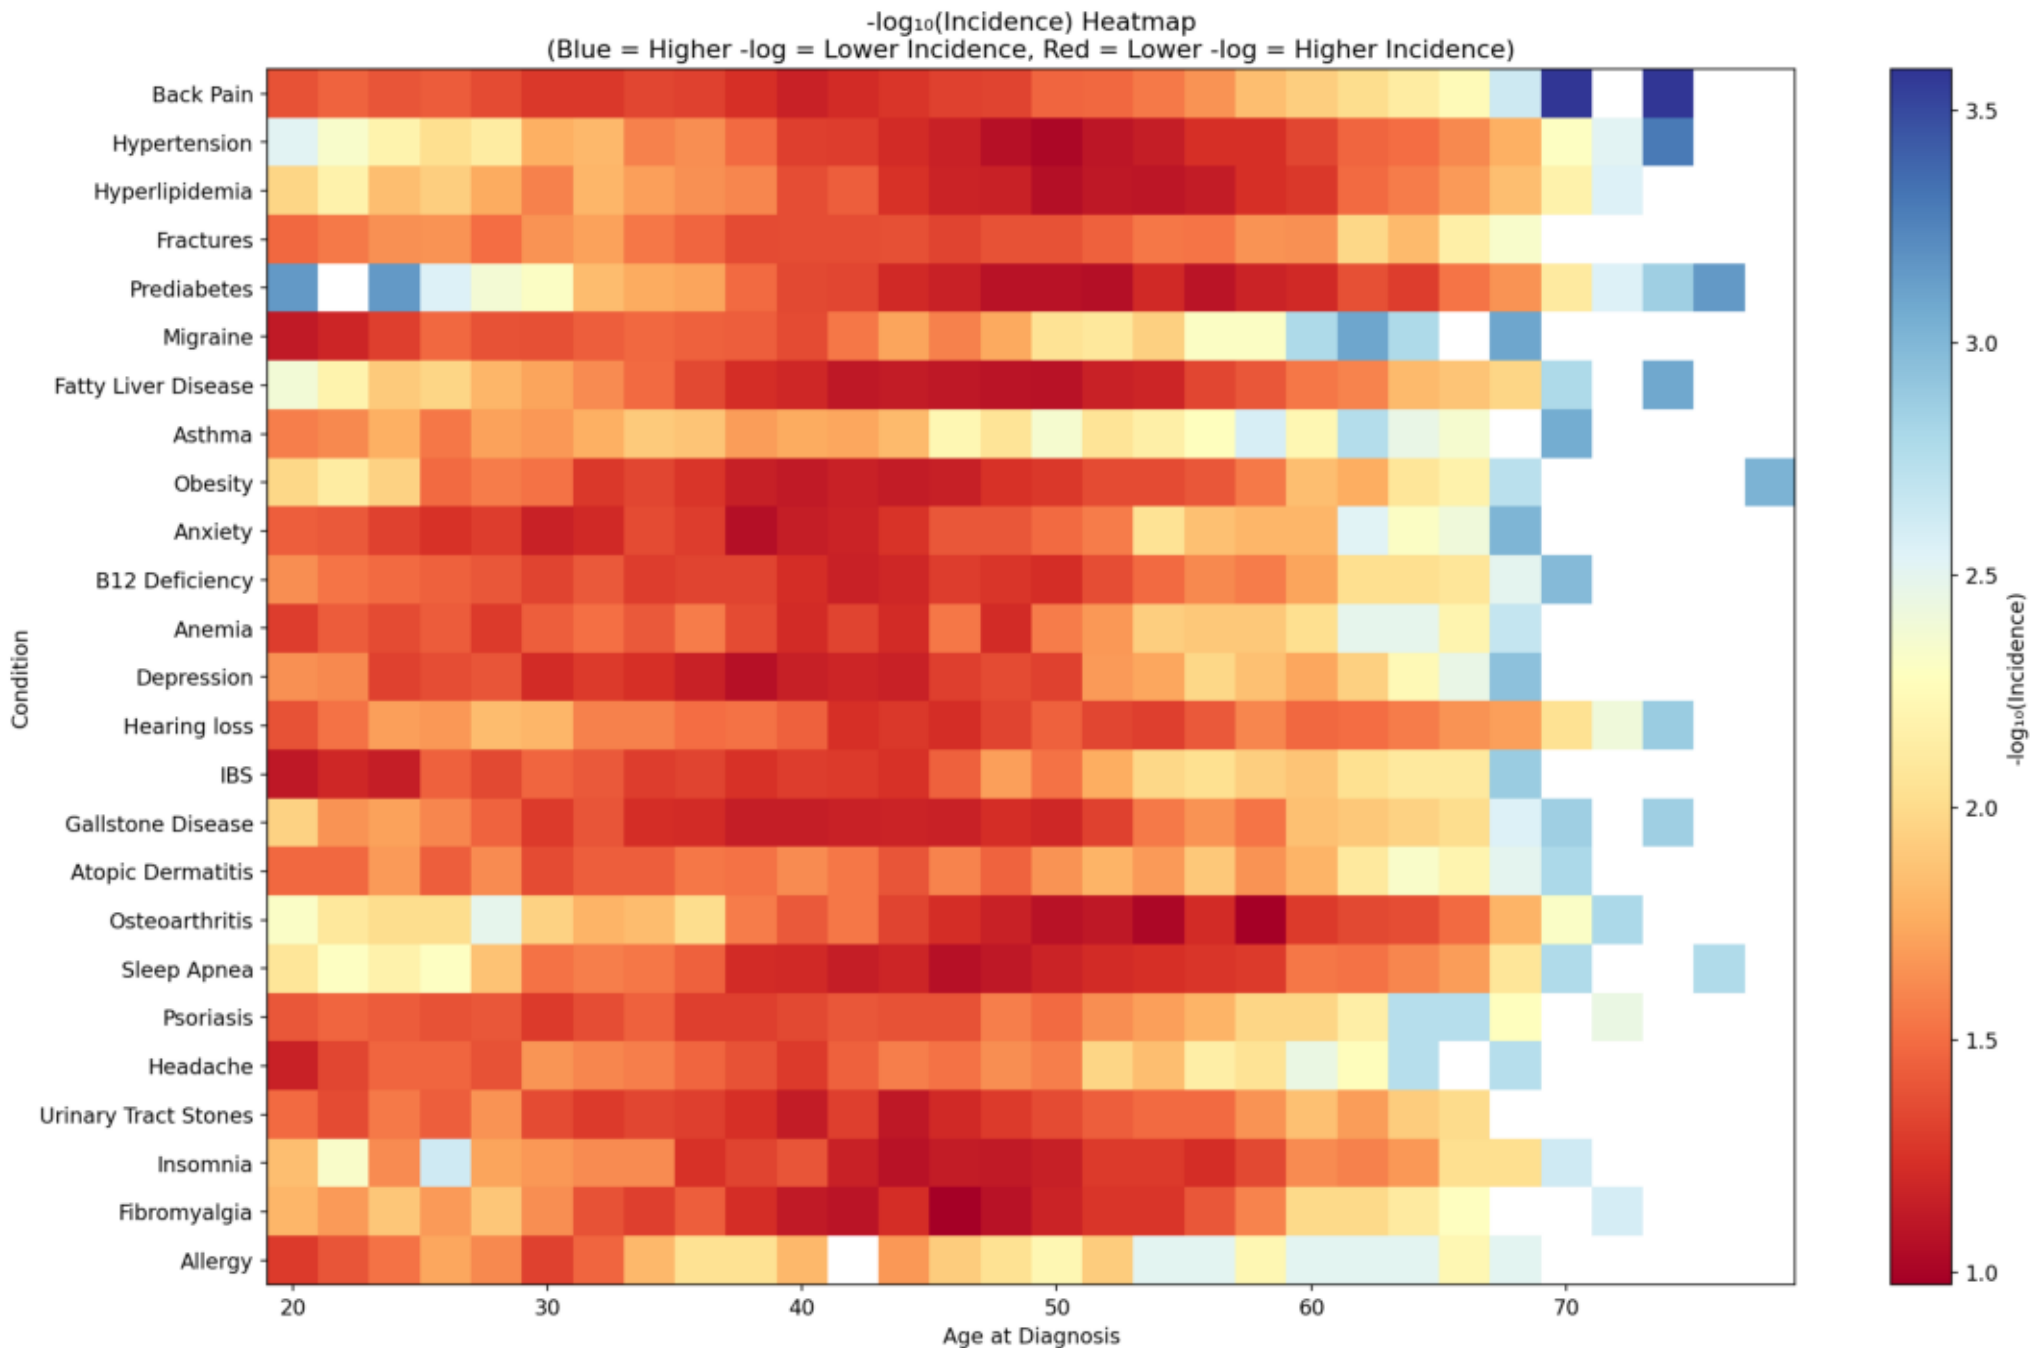

$-\log_{10}(\text{Incidence})$ by Age for Top 12 Conditions

$-\log_{10}(\text{Incidence Rate})$ by Age at Diagnosis

(Higher std = wider age distribution)

TOP 30 CONDITIONS BY SAMPLE SIZE

Condition	N	Mean	Median	Std
Back Pain	3873	37.0	38.0	12.6
Hypertension	1978	49.2	50.0	10.6
Hyperlipidemia	1774	48.3	50.0	12.0
Fractures	1726	33.8	36.0	17.3
Prediabetes	1429	51.8	52.0	9.3
Migraine	1229	25.9	23.0	12.7
Fatty Liver Disease	1217	46.6	47.0	9.9
Asthma	1144	16.4	11.0	15.4
Obesity	1056	41.5	42.0	12.2
Anxiety	1019	36.4	37.0	11.4
B12 Deficiency	950	39.6	40.0	12.7
Anemia	939	32.3	32.0	14.7
Depression	869	38.1	38.0	11.1
Hearing loss	761	40.0	44.0	18.6
IBS	758	33.3	33.0	13.2
Gallstone Disease	718	41.7	42.0	10.9
Atopic Dermatitis	632	27.5	26.0	18.1
Osteoarthritis	622	50.4	52.5	11.6
Sleep Apnea	596	46.9	47.0	10.7
Psoriasis	561	31.5	32.0	15.4
Headache	558	27.4	24.0	14.3
Urinary Tract Stones	500	39.8	40.0	12.6
Insomnia	422	44.8	46.0	12.0
Fibromyalgia	387	43.1	44.0	10.5
Allergy	328	18.6	15.5	15.0
Ischemic Heart Disease	237	55.2	54.0	8.4
Retinal detachment	196	48.0	52.0	13.7
Gout	185	44.8	44.0	10.3
G6PD	177	14.0	5.0	16.7
Endometriosis and Adenomyosi	177	30.3	29.0	9.3

KEY FINDINGS

1. EARLIEST ONSET CONDITIONS (Mean Age < 30 years)

These conditions typically develop in childhood or young adulthood:

- Migraine: Mean age 26 years (n=1229)
- Asthma: Mean age 16 years (n=1144)
- Atopic Dermatitis: Mean age 28 years (n=632)
- Headache: Mean age 27 years (n=558)
- Allergy: Mean age 19 years (n=328)
- G6PD: Mean age 14 years (n=177)
- Thalassemia: Mean age 18 years (n=86)
- FMF: Mean age 29 years (n=42)

2. LATEST ONSET CONDITIONS (Mean Age > 50 years)

These conditions typically develop in middle age or later:

- Prediabetes: Mean age 52 years (n=1429)
- Osteoarthritis: Mean age 50 years (n=622)
- Ischemic Heart Disease: Mean age 55 years (n=237)
- Erectile Dysfunction: Mean age 52 years (n=104)
- Meniscus Tears: Mean age 51 years (n=87)
- Perimenopausal Disorders: Mean age 51 years (n=65)
- Atrial Fibrillation: Mean age 59 years (n=55)
- Hyperparathyroidism: Mean age 51 years (n=41)

3. WIDEST AGE DISTRIBUTIONS

Some conditions span a wide range of ages at diagnosis:

- Sinusitis: Std = 20.0 years
- COPD: Std = 19.3 years
- Hearing loss: Std = 18.6 years
- Atopic Dermatitis: Std = 18.1 years
- AV. Conduction Disorder: Std = 17.7 years

4. NARROWEST AGE DISTRIBUTIONS

Some conditions cluster tightly around a specific age:

- Perimenopausal Disorders: Std = 4.6 years
- Polycystic Ovary Disease: Std = 5.6 years
- Atherosclerotic: Std = 7.2 years
- Gallbladder Polyp: Std = 7.6 years
- Ischemic Heart Disease: Std = 8.4 years
